

Accessible B.C. Act Principles

The Accessible BC Act includes a list of principles to consider as organizations develop an accessibility plan. The Definitions are adapted from the foundational document [BC Framework for Accessibility Legislation](#).

Adaptability: Accessibility plans should reflect that disability and accessibility are evolving concepts that change as services, technology, and attitudes change.

Collaboration: Promoting accessible communities is a shared responsibility and everyone has a role to play. Accessibility plans should create opportunities for Organizations and communities to work together to promote access and inclusion.

Diversity: Every person is unique. People with disabilities are individuals with varied backgrounds. Individual characteristics, including race, gender, sexual orientation, religion, and lived experience, greatly inform the experiences of individuals. Accessibility plans should acknowledge the principle of intersectionality and diversity within the disability community.

Inclusion: All British Columbians, including persons with disabilities, should be able to participate fully and equally in their communities.

Self-Determination: Accessibility plans should seek to empower people with disabilities to make their own choices and pursue the lives they wish to live.

Universal Design: The Centre for Excellence in Universal Design defines Universal Design as “the design and composition of an environment so that it can be accessed, understood, and used to the greatest extent possible by all people regardless of their age, size, ability or disability.” An accessibility plan should be designed to meet the needs of all people who interact with the Organization.
